UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

FOREWARD

The Nevada State ASC Committee is pleased to be able to provide this accounting of our 1971 activities and hopes this annual report provides the reader with a better understanding of the role of ASCS in Nevada agriculture.

Nevada farmers and ranchers have increased their participation in the farm programs since passage of the Agricultural Act of 1970 and the advent of the set-aside concept. Although the farm programs have limited impact, State-wide, they can be extremely important when viewed from the individual county's standpoint as evidenced by the cotton program.

Investment of Federal funds in the area of environmental improvement, through the Rural Environmental Assistance Program (REAP) has proved to be a very popular program. The partnership between the agricultural producer and ASCS is helping to provide a better environment for all.

Our county ASC committeemen and their able staffs are to be complimented on their effective administration of ASCS programs and their concern for service to Nevada farmers and ranchers.

NEVADA

COUNTY COMMITTEE ELECTIONS

Nevada counties are determined as one-community counties for ASCS elections. Regulations and ballots were mailed to all known agricultural producers and Nevada ASCS elections were conducted by mail ballots. Nominees for office of county committeeman were obtained by petitions signed by agricultural producers and/or incumbent county committeemen in the case of insufficient nominations. The nominee who received the greatest number of votes was elected for a three year term of office. The next two nominees receiving the second and third largest number of votes were elected alternate committeemen for one year. Two members of the county committee are usually carried over as regular members of the committee determined by the number of years remaining in their three year term of office.

The newly elected committeemen and held-over committeemen take office beginning January 1 of each year. An organizational meeting is first held by the three regular members of the county committee to determine among them the Chairman, Vice-Chairman and Regular Member for the coming year.

Following is a list of Nevada ASC State & County Committeemen appointed and elected for 1972. Included in the list is the State Office staff, address of the State Office and County Executive Directors and addresses of the eleven county offices in Nevada. Nevada administers ASCS activities for three California counties from the Douglas County Office. Committeemen for Alpine, Inyo and Mono Counties are included with the Douglas combination.

NEVADA STATE ASC COMMITTEE

Chairman: Laurence Montero, Box 1010, Winnemucca, Nevada 89445
Members: William M. Johnson, RR Box 50, Minden, Nevada 89423
Hollis Harris, P.O. Box 244, Pahrump, Nevada 89041
Dr. Dale W. Bohmont, Director, Federal Extension Service, University of Nevada, Reno, Nevada 89507

COUNTY OFFICE OPERATING EXPENSES
For the 1971 Calendar Year

Operating funds are allocated county offices each fiscal year. The calendar year summary shown here is based on the second half of the 1971 fiscal year and first half of the 1972 fiscal year. Administrative allocations are issued county offices from a workload system developed to determine funding and staffing. County offices report annually the number of units accomplished during the past year and the estimated number of units to be accomplished in the next year. Units are determined from base documents used in the various ASCS programs administered in the county office. The cost of carrying out the actual performance of each unit is computed to the ratio of cost by man-day for each unit. The computation of man-days to units performed is accomplished by 160 verification counties selected in ASCS offices in the 48 continental states in the USA. Results are analyzed and the cost for each man-day for certain size county offices are projected by linear and quadratic equations, to get the cost data for man-days in county offices that report a certain number of units accomplished in the reporting year.

Initial county allocations are issued county offices based on the workload system. These are adjusted for combination counties, farm density factors and travel required to administer programs and attend committee meetings.

The County Office Expense System is accounted for through automatic data processing. The ADP System accounts for input and output data for each employee and administrative expense. Collections, checks and personnel documents are optically scanned and computed by a central computing system, located in Kansas City, Missouri, every two weeks. Bi-weekly ADP printouts are sent to county offices for review and reconciliation with county office bank accounts. Quad-weekly printouts are issued to State and county offices with summarized expenses for the quad-weekly period, and cumulative expenses relative to county office allocations and limitations. The ADP system is in the second year of operation and most problems and errors have been corrected through the use of new input and output methods developed to eliminate reoccurring errors.

County offices are listed by the parent county committee and combination counties serviced by the parent county are as follows.. Under the ADP System, all expenditures are shown for the parent county office and separate expenses are not listed for each county committee. Three California county committees (Alpine, Inyo and Mono) are served by the Douglas (Gardnerville) County ASCS Office.

RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

The federal conservation cost-sharing program took on a new name and added environmental improvement emphasis in 1971. The program is now known as the Rural Environmental Assistance Program (REAP). Added emphasis was placed on the development of new practices and encouragement of projects which solve farm-related pollution problems and provide community wide and general public benefits.

The Rural Environmental Assistance Program encourages conservation work by sharing with farmers and ranchers the cost of installing needed soil, water, woodland and wildlife conservation and pollution abatement practices. Generally, the costs are shared on a 50-50 basis. Higher rates of cost-sharing are available to individuals or groups for priority practices. High priority practices include those which reduce farm-related pollution from erosion, animal wastes and agricultural chemicals and provide wide public benefits.

Under the special project provision of REAP, practices different from those in the national program may be developed to solve conservation or environmental problems peculiar to a local area. If new practices are not required, old ones may be adopted to fit the local need. Special projects are generally a group effort, performed by the pooling of resources by many individuals. Cost-sharing assistance may be increased up to 80 percent of the cost, if needed to encourage the special project. Special projects which provide wide public benefits or improve the quality of the environment are strongly encouraged by the State committee.

The Rural Environmental Assistance Program (and its predecessor program) has long led the way in the abatement of pollution of and from our agricultural lands. The numerous erosion control structures and acres of grass and trees planted under the program have played the major part in helping keep our streams and rivers clean and our air fresh. Drainage projects have removed polluted ground water to provide a clean environment free of disease and insects. New practices are continually being developed to aid in the accelerated fight against air and water pollution.

Everyone, rural and urban people alike, gain from the conservation practices offered under REAP. In addition to pollution abatement, the REAP offers livestockmen assistance for range improvement practices such as cross fencing, grass seeding and livestock water facilities. It provides practices such as land leveling, ditch lining, reorganizing irrigation systems to row crop, hay and grain farmers. It provides more abundant wildlife for sportsmen and naturalists through practices to build reservoirs, farm ponds, shallow water areas and to produce food and habitat for fish and wildlife.

The Rural Environmental Assistance Program is a partnership in conservation. This partnership is helping to provide future generations with a productive agricultural industry and a clean environment.

SET-ASIDE PROGRAMS

The Agricultural Act of 1970 provided a new concept in ASCS farm programs aimed at adjusting the production of cotton, feed grains and wheat for 1971 and subsequent years. The Act changed the direction of farm program policies emphasizing greater reliance on the market place and less reliance on farm programs as a source of farm income. The concept of rigid allotments and bases as a means of controlling crop production was eliminated. With allotments and bases no longer dictating production patterns, farmers had the opportunity to grow those crops they could produce most effectively. The new concept to the cotton, feed grain and wheat production problem was termed SET-ASIDE.

The 1971 set-aside programs were designed to:

- Maintain the production of cotton, feed grains and wheat at levels which would satisfy current needs and provide adequate but not excessive reserves.
- Protect and improve farm income.
- Give farmers greater opportunity for decision making to gear their farming operations to commercial markets.
- Help the United States maintain a competitive position in world markets.

Participation in the 1971 set-aside programs was completely voluntary. Participation, however, was limited to those producers which had cotton or wheat allotments or feed grain bases on their farms. A farm operator could participate in one or more of the cotton, feed grain or wheat programs depending upon his desires and the allotments or bases established for the farm. The farm allotment or base for 1971 was based on the farm's past history of producing the applicable crops particularly in the years 1959 and 1960.

Participants were required to SET-ASIDE an acreage of good productive cropland to an approved conserving use. The set aside acreage requirement was dependent on the size of the farm allotments or bases. Cotton participants were required to set aside an acreage equal to 20 percent of their allotment; feed grain participants, an acreage equal to 20 percent of their total base; and wheat participants, an acreage equal to 75 percent of their allotment.

Participants were also required to maintain their farm conserving base. The farm conserving base was the adjusted 1959-1960 average number of acres on the farm which were devoted to conserving crops and uses. The cropland remaining after the set-aside and conserving base requirements were met could be planted to any crop desired.

For participating in the programs, producers received set-aside payments. The 1971 set-aside payments were based on the following:

- Cotton - 15 cents per pound times the farm payment yield times the smaller of the planted acreage or the cotton allotment.
- Wheat - \$1.63 per bushel times the farm projected yield times the wheat allotment.
- Feed Grain - The farm projected yield times 50 percent of the applicable feed grain base times 32 cents per bushel for corn and 29 cents for grain sorghum.

PRICE SUPPORT PROGRAMS

Price support programs are designed to (1) help assure stability of farm income and prices, (2) assist in bringing about a better balance between production and consumption, and (3) assist farmers in the orderly marketing of crops. Under these programs, eligible producers are assured of price assistance for a commodity meeting eligibility requirements regardless of fluctuations in the market price. The price support operations are administered by ASCS and financed by Commodity Credit Corporation. Two support methods were used in Nevada during 1971 - loans and payments.

PRICE SUPPORT LOANS

Price support loans were available to producers for wheat, corn, grain sorghum, barley, oats, cotton, honey and many other commodities not produced in Nevada. Some of these commodities were also eligible for resale, which is an extension of the loan beyond the maturity date.

Loans permit eligible producers to hold their harvested crops to take advantage of possible increases in market prices. A loan can be repaid with interest when the crop is sold, or the crop under loan can be delivered to CCC, thus satisfying the loan. A producer with a loan is assured of receiving at least the loan price for the crop.

Loans are also available to help producers finance new facilities needed to store crops eligible for price support. These loans are for up to five years and are repaid in four annual installments.

PRICE SUPPORT PAYMENTS - WOOL PROGRAM

The National Wool Act of 1954, as amended, provides that support of the price for wool may be carried out through annual incentive payments to producers. The program is designed to encourage domestic production at a yearly level of 300 million pounds of shorn wool. This policy was established by Congress as a measure for our national security and in promotion of the general economic welfare. The total amount of payments under the Act is limited to 70 percent of the accumulated totals of duties collected on imports of wool and wool products.

The payment rate of 102.8 percent for 1970 was the percentage needed to bring the average price of 35.5 cents received by growers for wool sold during the marketing year up to the previously announced level of 72 cents per pound of shorn wool. A payment of \$1.46 per hundred pounds of unshorn lambs sold was also made. This payment was established at a level in relationship to the payment for shorn wool. Unshorn lamb payments were made to avoid unusual shearing prior to marketing in order to obtain the payments on shorn wool.

Wool growers are authorized to organize and conduct advertising and sales promotion activities, financed by deductions from their payments. An agreement between the Secretary and the American Sheep Producers Council, which was approved in a producer referendum in 1966, is designed to improve the demand for wool and lamb products in the free market. A referendum to continue these activities through 1973 was held in June of 1971. About 87 percent of the producers owning 87.2 percent of the sheep represented by those voting in the referendum, favored the continuation of the activities.

COMPLIANCE

The success of all ASCS farm programs depends upon program participants complying with all program requirements. County ASC committees and office personnel, under the direction of the State ASC committee, are responsible for checking producer compliance with program provisions.

Set-Aside Program Compliance. The farmer certification method of determining compliance was used in all counties in Nevada for the first time in 1971. Under this method of compliance, farmers must visit the county ASCS office and report his program acreages and certify that he is in compliance with other program requirements. Farmers when certifying are expected to accurately report acreages and for failing to do so may lose program benefits. County ASCS office personnel check 25 percent of the reporting farms to maintain program control and to insure certifications are accurate.

Measurement Service. In 1971 measurement service was offered in all Nevada counties. This service includes measuring and staking areas before planting, measurement of land after planting, or measurement for any program the farmer requests. Measurement service assures the participant that program acreage provisions will be met, and eliminates the need for acreage adjustments after planting.

The entire cost of the measurement service is paid for by the producer. Measurement service is very important to producers under the certification program.

REAP Compliance. County ASC committees also have the compliance responsibilities for REAP conservation practices for which the technical responsibility has not been assigned to another agency. County office employees are required to check enough of these practices (at least 5 percent) to determine whether or not plans and specifications have been followed by the farmer. In 1971, at least five percent of all the farms participating in REAP were also checked to insure that practices were being maintained according to program policies. The records of vendors providing conservation materials and services (CMS) under REAP were also subject to spotchecks.
